DETAILED ACTION

Status

1. Claims 1-7 and 13-15 are amended. Claims 7-11 and 16-20 are withdrawn from consideration. Claims 1-6 and 12-15 are pending and presented for examination.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 9/22/2008 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-6 and 12-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Imamura et al. (International Journal of Hydrogen Energy, 25, 2000 pp. 837-843).

In regard to claim 1, Imamura teaches a Mg/G, where G is graphite, composite that includes titanium isopropoxide as an organometallic catalyst to increase the hydriding activity of the material (section 3.3).

In regard to claim 2, Imamura teaches that the organometallic catalyst is added to the Mg/G composites as solutions using a wetness technique.

In regard to claims 3 and 13, Imamura teaches that the material is nanocrystalline, as the crystallite size of the Mg/G composite is in the 14-26 nm range (page 841, column 1).

In regard to claim 4, it is well settled that titanium isopropoxide has a crystalline form. Further, it is used in the instant application as a nanocrystalline organometallic catalyst.

In regard to claims 5, 6, 14 and 15, the material taught by Imamura includes 8 cm³ of benzene as a solvent, 4.2 g of Mg, 1.8 g of graphite and Ti(OC₃H₇)₄ that correlates to 2.5 mass% Ti (section 3.3). This mixture therefor incorporates a material with an organometallic content of approximately 1.9 mol%.

Response to Arguments

5. Applicant's arguments with respect to claims 1-6 and 12-15 have been considered but are moot in view of the new ground(s) of rejection.

The requirement in the amended claims that the material contains magnesium necessitated the new ground of rejection set forth in this communication.

6. The status of claims 7-12 and 16-20 should be listed as withdrawn, not the current incorrect designations of currently amended and previously presented. (MPEP 714-II-C)

Conclusion

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
